INPORMATION

EXAMINERS ACTION

CONSISTENT

Serial Number: 08/460,01

Art Unit: 2201

1. Claim 19 is rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 19, section (ii), the word "cradle" is misspelled.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

"A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year public use or on sale in this country, more than one year prior at to the date of application for patent in the United States."
- 3. Claims 7 and 19 are rejected under 35 U.S.C. § 102 (b) as being anticipated by Chiabrandy et al..

Chiabrandy et al. disclose a field howitzer comprising:

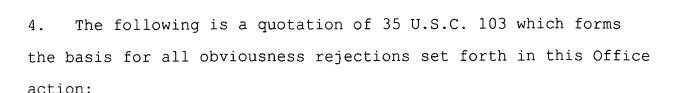

i.	a chassis with trunnion support,	166 PEDESTAL (fig. 1)	
ii.	a howitzer barrel,	fig. 1, col. 1, lines 39-40 48, 98, 100	
iii.	a cradle with hollow members,		
iv.	a recoil buffer system,	98	
v.	a recuperator system, and	100	
vi.	a single hydraulic accumulator arrangem	ment. 98, 100; co	

Serial Number: 08/460,013

Art Unit: 2201

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the difference between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) and (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

5. Claims 7 and 19 are rejected under 35 U.S.C. 103 as being unpatentable over Seamands et al. in view of Williams.

Seamands et al. disclose field artillery comprising:

- i. a barrel, 12
- ii. a cradle including hollow members, 20, 22
- iii. a recoil buffer system,

-4-

Serial Number: 08/460,013

Art Unit: 2201

iv. a recuperator system, and

36

v. a single hydraulic accumulator.

22

Seamands et al. apply as previously cited. However, undisclosed is a barrel that is explicitly referred to as a howitzer barrel and a chassis with trunnion support structure. Williams teaches a barrel that is explicitly referred to as a howitzer barrel, 12, col. 2, lines 48-54; and a chassis with trunnion support structure, 16. The gun and cradle arrangement of Seamands et al. is silent as to its intended support structure. Williams teaches one method known to one of ordinary skill to support a gun and cradle arrangement, see fig. 1. Applicant is selecting and assembling analogous art structure that performs in the same fashion after assembly as it is known to function prior thereto. It would have been obvious to a person of ordinary skill in this art at the time of the invention to apply the teachings of Williams to the field artillery piece Seamands et al..

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hooker, Fischer, Barnes, Voller, and Metz et al. disclose state of the art field artillery pieces.

7. Any inquiry concerning this communication should be directed to Stephen M. Johnson at telephone number (703)306-4158.
